PEMOFAMIAM FOR: The Record

: intelligence Costs TIBIET!

: Bureau of the Bulget Instructions for Preparation FIGURE

of Exhibit A -- Nationated FY 1953 Intelligence

Cost Report.

1. Some revision of reference instructions will be required to achieve a sufficient degree of standardization and coordination within the Community to insure that cost figures will be realistic, maningful and comparable with each other.

2. The following comments cover each item in the BOB Instructions and are based on an analysis of the FY 1958 cost figures.

3. Collection

- a. Requirements Courdination: The definition or explanation of this Item by BOB seems clear enough although we probably should include costs involved in the initial development of the requirements at their original source as well as the "requirements processing" machinery in each department or agency and such community machinery as the IPC, CCPC, and other committees or groups who work partly or wholly on the requirements problem. The Community manifers seem to be "in line" on this item with the exception of the Air Porce which allocates 9.15 of its entire budget for this item and MSA which shows no charge at all.
- of foreign invelligence information from non-governmental. organizations and individuals within the US is covered by peregraph 7 of MSCID No. 2, it would seem appropriate to relate this ectivity to the MSCID covering it and to the same for any other activity which is directly related to the provisions of a NSCID. The Air Porce expenditure for this activity is one-half that of the CIA which has a "service of common concern" responsibility in this field. If the Air Force activity is "supplemental" to that of the CIA and conducted under the provisions of MSCID No. 2, that fast should be clearly stated. On the other hand, if this is an entirely separate activity, it simulable clearly defined and understood; the sees goes for the other departments and sgencies.

DOD REV DATE 3 1981 BY ONIG COMP ON 38 TIME OF Approved For Release 2002/08/13 : CIA-RDP80-01237A000100010003-2

25X1

- c. Foreign Services and Attaches: From the figures submitted by State, it would appear that they are going on the besis that all information collected and distributed by their Foreign Service personnel is "intelligence" and therefore a amjor portion of their total foreign service cost is chargoable to their foreign intelligence effort. It is not believed that so heavy a charge would be reasonable if the community adopted the principle that these intelligence cost figures should be restricted to, but cover all, intelligence activities coming within the coordination authority of the DCI and the coordinance of the USIB. If DOD followed State's procedure, they might logically include a portion, at least, of the cost of MAGO, etc., which does obtain information which is useable by the intelligence exemity, although not obtained originally at their request or to meet their requirements. In fairness to State, it is believed that a procedure should be worked out that would enable their cost figures in this area to be reasonably comparable to those substitted by the military services.
- d. Other Overseas Overt Collection: A more definitive heading should be agreed upon and the pertinent NSCID provisions governing the activity should be indicated. If the activities of the various departments and agencies covered by this heading are too varied to fit under a "blanket term," sub-headings can be used to insure clarity and common understanding.
- e. Repicusco: We should use the definition given in HSCID No. 5 and include "claudestine counterintelligence." All other types of bounterintelligence" should be appropriately covered as those activities are also a part of the US foreign intelligence effort and subject to the provisions of the HSCIDs.
- f. COMPT: If the term is designed to limit itself to the collection of rew COMPT and not to its further "processing" prior to its use in the production of "finished intelligence," we should probably use the term "COMPMT Collection" to swoid confusion with the other activities which are covered by the term "COMPMT Activities" as defined in HSCID No. 6. In fact, it might be better to borrow language from MSCID No. 6 and use a heading of "COMPMT Interception" to cover the "collection" phase of this activity.
- as with COMPA, it is noted that specific reference is made to the pertinent RECIDS. However, the figures would indicate that there is some confusion within the community as the total enount allocated to HIMT by the Community as a whole expears low, and it is not believed that Air Porce participation is less than for any other number.

La seal and and All

h. Other Covert Collection: More definitive terminology should be used so that all concerned will understand what we are talking about under this item.

1. Production

- a. The activities to be included under this heading should be clearly defined and understood by all concerned. Besically it should ever all those activities covered by MSCID No. 3 (Coordination of Intelligence Production). It is not believed that MSA activities nor map production, as much, should be included under the heading "Production." On the other hand, it is realized that there is a broad area of intalligence activity which takes place after collection of the rew material but before the production of finished intelligence. It may well be that we need snother basic category such as "Processing," which can be used to define those various intelligence activities which are carried out to make "rew information" useable by the analysis who produce "finished intalligence." As now presented, the figures for MiA here a major effect on the position of DOD in the "Production" field, i.e.; by including MSA under "production" DOD shows an allocation of 22.6% of its funds to that exes of activity, calitting MiA reduces the figure to 17.1%.
- b. It is very important that the distinction between "information" and "intelligence" be made clear, and that the various processes undertaken to achieve the "end product" of finished intelligence be well defined and placed in proper relationship to each other.
- c. It is noted that the BOB Instructions call for figures on "Production of intelligence by an agency or its contractors..." This appears to be a clear requirement that the cost of "external research" be included. This must be done in order to get a realistic picture of the proportion of intelligence funds being spent on "production." The present figures tend to give the impression that production of intelligence is mething the short end of the stick.
- d. The sub-headings under the basic term "Production" should be studied to make sure there is a common understanding as to their activities to be included under them. There may be a possibility of some confusion as between Ground, Havel and Air forces intelligence and Scientific and Tachnological intelligence as the first three refer to "equipping" and SMF refers to "equipment and vespons in being."

e. It is noted that "cartographic preparation" is included under Geographic (Intelligence). The figures indicate that this is an area of possible distortion due to the heavy charges for this item by the Services, particularly Army. In those cases where the intelligence element of a department or agency is charged with the production of material, such as maps, which are not in theseselves "intelligence" and are used widely for purposes other than intelligence, it might be well to create a new category for this type of work such as "special support" or some other term which would separate those costly activities which, in large measure, are not a part of the regular intelligence process.

5. Colleberal Activities

- a. Screening and Distribution: This term is rather broadly defined in the EOS Instructions and applies to the "handling" of both raw and finished intelligence. This item may be esseing some confusion as such other items as "Translation," "Printing and Reproduction," and even "Requirements Coordination," are all involved with the "handling" of raw and finished intelligence. We should also consider that the Community normally thinks of "rew information" rather than "raw intelligence." It might be easier to include "acreening and distribution" activities as a part of other more basic activities.
- b. Training: The wide variation in the cost figures given for this Item indicates that there is no common criteria for applying costs under this heading. The Community as a whole allocates more funds to "training" than to any item of "intelligence production," and there is great variation as the percentage allocation for this activity by the member departments and agencies. The Army, for example, allocates more namely to "training" than to its entire "production" affort. On the other hand, the Air Force shows a relatively low figure for this item.
- c. Translation: Assuming the figures are correct, the Community is spending only 0.7% of its "Intelligence Dollar" for translation work which might explain the difficulties in this area.
- d. Reference Racilities: There would not appear to be any difficulties under this heating.

The state of the s

CONFIDENTIAL

- e. Recearch and Development: This represents one of the more costly items of activity in the Community; there is considerable variation between the members, and the BOB description is a rather broad one. It might be more meaningful to divide this activity as between "collection" and "enalysis," or, better still, break out the R&D as between the various items listed under "Collection" and "Production." It may be that "external research" costs are involved here too.
- Frinting and Seproduction: This term as defined by BOB may lead to some confusion. For example, it includes reproduction of maps "related to activities covered elsewhere in the estimates." It is possible that a major portion of the Army Map Service might more properly be included as a sub-heading under this item rather than under "geographic intelligence production."

6. Support

- a. Administration, Supervision and Coordination: For the Community, as a whole, this is the largest single cost item on the list with the exception of COMINT collection, and it eats up a large portion of the military services "Intelligence Dollar." There should be a clear and common understanding as to the activities included under this heading.
- b. Communications: There does not appear to be any problems in this area although it is noted that Many and MSA allocations for this item are considerably higher than the other members of the Community.
- c. Security: It is not believed that the Community spends only 0.2% of its "Intelligence Dollar" on security. It is recognized that BOB restricted these costs to those directly related to the activities covered elsewhere in the astimates. However, as the USIB has cognizence of all counterintelligence activities, this item should be examined to make sure that all costs related thereto are properly included. Furthermore, it would be logical to include security costs that are even indirectly connected with specific intelligence activities in the same fachion that map production for other than intelligence purposes is included.
- 7. General: It is noted that the BOB instructions call for the inclusion of cost data on "activities of the intelligence components

ras 2" are

Approved For Release 2002/08/13 : CIA-RDP80-01237A000100010003-2

of, and intelligence units attached to, the major overseas military commands and the US elements of combined commands," but not to include tactical or combat intelligence activities. For clarity, it might be better to call for cost data on those activities of the overseas military commands that are subject to the provisions of the NSCIDs, the coordination of the DCI and the cognizance of the USID.
